

MOTIVE POWER TRACTION BATTERY

GS Yuasa Multi-Purpose Traction Battery

Traction batteries have a wide range of applications!

Traction batteries are used to propel battery-powered electric vehicles such as forklifts, electric golf carts, ride-on floor scrubbers, mining locomotives and a whole host of other vehicles.

Our traction batteries are some of the highest quality batteries to be found worldwide. The technology, designed by GS Yuasa, employs our original glass fiber tubes and is a unique differentiator, while still meeting our customers' more basic requirements of a long service life, stable quality and of course, easy maintenance.

AGV System

Electric Sweepers

Battery Forklift

Explosion-Proof Battery Locomotive

Battery Locomotive

V Series Batteries

V series batteries are GS Yuasa's best-sellers and are well known for their high performance and unsurpassed long service life.

Not only forklift manufacturers, but also battery dealers choose our products based on the specific demands of end users in the market.

GS Yuasa makes both JIS type and DIN type batteries.

GY JIS ^(*) : Widely accepted by global forklift manufacturers for its quality.

GY DIN ^(*) : Popular for tubular type DIN with a long cycle life.

^(*) JIS: D_5303-1(2004)

^(*) DIN: IEC60254-1,-2

Vent plugs are not just "caps" anymore!

Vent plugs are the caps on each individual battery cell, they are used to secure the electrolyte and replenish the distilled water.

We've made improvements by adding floats inside the plugs which indicate to our customers the current level of electrolyte.

The mechanism is very simple. If there is enough electrolyte in the cell, the indicators will pop up when the customer opens the transparent cover. But if the indicator does not appear, then the customer will need to add more water.

At GS Yuasa, we're not only trying to extend the life of our batteries but we're also trying to improve the general usability of our products.

Tubular Plates Prolong Your Battery Life!

Traction batteries are used in harsh environments with extremes of high and low temperatures, and sometimes under heavy duty.

Despite this, GS Yuasa has succeeded in extending the battery life by adopting glass fiber tubes for the positive plates.

We use glass fiber because this keeps the active material leakage to a minimum.

We also carried out cycle life tests on our batteries at high temperature (60°C) and confirmed that our products have a cycle life over 250 higher than other manufacturers' batteries under identical conditions.

High Temperature Cycle-Life Test Results at 60°C

GS Yuasa Glass Fiber Tube

- Higher quality
- Less leakage

Introduction of GS Yuasa Traction Battery Parts

- | | | |
|----------|---|---|
| 1 |  | Vent Plugs
Caps of the cells and users are able to see the electrolyte level by checking the float on the plug. |
| 2 |  | Lead cables
Cables that connect the cells and plugs. |
| 3 |  | Plugs
Parts that connect the batteries and electric vehicles. |
| 4 |  | Level sensors
Sensors that indicate the electrolyte level. |
| 5 |  | Connectors
Parts used to connect the cells with each other.
*Connector in the picture is for JIS battery. |
| 6 |  | Connector Covers
Parts used to cover the connector. |

Easy Watering Device “10L Watering Tank”

Easy and Convenient Watering! (10L Water Tank)

1. Watering:

Open the cap when the float of the liquid inlet plug is lowered and water.

2. Watering Complete:

If the white line on the float of the liquid inlet plug is visible, it is complete.

10L Watering Tank

Watering is complete when the white line is visible.

Easily water with one hand.

Liquid Level Sensor

The sensor detects the status of the liquid level and notifies with LED indicators.

Key Features:

- High-reliability circuit with a simple design.
- Cost-effective.
- Low power consumption due to the use of LEDs.
- There are also models available for water supply systems.

[Display]

Red LED Green LED

[Green LED On]

The liquid level is normal.

[Red LED Flashing]

Watering is required.

F88A auto filling system

- **Next generation of F88 auto filling system**
- **Water stopping structure**
Stable water stopping at any point of the filling system.
- **High visibility**
Able to check the float height with transparent vent plug.
- **Anti droplet structure (Figure1)**
Able to emit the gas only and avoid splashing during charge.

Figure1

Discharge Characteristics of a Forklift Truck Storage Battery

Each hour rate (for example) Just after fully charging, Battery temperature: 30°C, Discharge rate C: Rated one.

Relationship between Discharge rate and Capacity

From the diagram above, the value of current (A) for different discharge rates of a storage battery with a 5-hour rate capacity of 400 Ah is shown below:

- 5-hour rate (5 HR) = 400Ah/5 = 80 A
- 3-hour rate (3 HR) = 400Ah x 0.85/3 = 113A
- 2-hour rate (2 HR) = 400Ah x 0.75/2 = 150A
- 1-hour rate (1 HR) = 400Ah x 0.6/1 = 240A

As you can see from the above description, the more often the forklift is used for lifting or the more often it's operated at high speed, the shorter the available working time of the storage battery becomes.

Relationship between Temperature and Battery Capacity

As you can see from the diagram above, the actual available working time of a forklift truck battery is shorter in winter than in summer. This is especially true in a refrigerated warehouse, where the actual available working time of the battery is noticeably shortened due to the high frequency of lifting (which required a great deal of electric current).

To counteract this problem, we recommend charging any battery which will be used in winter or will be used in a refrigerated warehouse to a slightly overcharged condition and to also warm up its temperature in advance (the most suitable battery temperature in this case seems to be about 30°C).

Life of a Clad-Type Storage Battery for a Forklift Truck

Although it depends on the specific use case and the operating conditions of each forklift truck, the life of the storage battery is in most cases described by its number of durable years of use or by the number of charging and discharging cycles it is capable of before the battery capacity decreases to between 60% and 80% of the original rating.

Although the life of a storage battery depends heavily on these conditions, it can be expected to be as long as up to about 4 years of use or up to about 1,200 charging and discharging cycles in normal use, whichever comes first.

DIN Cell Types

BS Cell Types

The batteries provide energy all over the world with Japanese technology, widespread service network and long-lasting products.

BOLT

Anti-self loosening the stainless bolt.

PLUG

For standard applications, specially designed plug for adequate degassing with the filter that prevents extraneous objects inside the cell. As optional, aquamatic plugs stop water flow automatically with floats inside.

AIRMIX FUNNEL

Ready for air-mix conversion at any time with the standard implementation.

POSITIVE PLATE

Tubular grid with high corrosion resistance.

NEGATIVE PLATE

Special flat grid design with high electrical conductivity.

SPACER

Creating space between cells to enable heat transfer.

CELL

DIN and BS Cells in accordance with DIN/EN 60254 Standards

PRISM

Prevents short circuit due to active material cumulation in the bottom of cells.

BOX AND LID

That are resistant against heat and impacts.

TRAY

Specially produced durable tray painted with dipping technique.

ELECTROLYTE

1,280 gr/cm³ sulfuric acid optimized for high cycle and low corrosion.

CONNECTORS

Isolated copper connectors in accordance with international standards.

POLE

Special designed terminals that prevent acid leakage.

SEPARATOR

Separator with high porosity, avoiding the short circuit with low electrical resistance.

Positive Plate

1. Product Features / Product Benefits

- » Tubular positive plates produced with “Specially Designed Gauntlet and Bottom Plastic”. • Providing long life and high protection against short circuits by minimizing the loss of active material. • Usage of active material made with a special formulation. • High Capacity.
- » Tubular grids are inserted into gauntlets that are acid resistant and have low electrical resistance and high permeability. The active material is filled into the gauntlet. • Non-woven Gauntlet prevents the loss of active material and capacity. • Positive active material that is produced from high purity lead oxides. • Minimum water loss.

Negative Plate

2. Product Features / Product Benefits

- » Special flat plate and material formulation.
- » Special negative active material for a long life.

Separators

3. Product Features / Product Benefits

- » Separators with high conductivity, minimum internal resistance, mechanically and chemically resistant.
- » High protection against short circuits.

Pole

4. Product Features / Product Benefits

- » Special designed pole and lids with grommet.
- » No acid leakage. Easy to service by unscrewing stainless bolts.

A: Filtered Plugs

- A » Plug filter prevents extraneous objects inside the cell. • With special top cover, density and heat controls can be done. • Enable the Hydrogen and Oxygen degassing safely while charging.

B: Float Plugs

- B » Special design for aquamatic systems. • Aquamatic system stops water flow automatically at the max electrolyte level and prevents overflow.

Electrolyte

5. Product Features / Product Benefits

- 1,28 electrolyte density.
- High performance with long life comparing to standard batteries.

EB Series (Made in Japan)

The most omnipotent item in our lineup.

(EB TYPE/12V)

MODEL	Nominal Capacity (Ah/5HR)	Dimensions (mm)				Acid (L)	Weight with Acid (kg)	Q'ty per Pallet
		(L)	(W)	(h)	(H)			
EB25TE	25	197	129	202	227	2.1	11.5	40
EB35TE	35	238	129	202	227	3.0	14.0	28
EB35LE/LER	35	238	129	202	237	3.0	14.0	28
EB50TE	50	260	173	202	225	3.8	20.5	20
EB50LE	50	260	173	202	236	3.8	20.5	20
EB65TE	65	305	173	205	228	4.1	24.5	18
EB65LE/LER	65	305	173	205	237	4.1	24.5	18
EB100TE/LE/LER	100	409	173	212	244	6.7	34.5	15
EB120TE/LE/LER	120	504	182	212	258	9.0	41.0	10
EB130TE/LE/LER	130	504	182	212	258	8.8	45.5	10
EB145TE/LE/LER	145	508	223	213	259	10.0	51.5	10
EB160TE/LE/LER	160	508	223	213	259	9.8	54.5	10

Advantages

- **Wide usage** Sweepers and electric wheelchairs etc.

GC Series (Made in Japan)

Another lineup that uses tubular plates.

Model	Voltage	Capacity (A)		Size (mm)				Battery weight with electrolyte (kg)	Amount of electrolyte (L)
		5HR	1HR	L	W	H	Total H		
GC140	6	140	84	262	181	267.5	291	30	6.9
GC200	6	200	120	262	181	267.5	291	33	6.3

Advantages

- **Easy maintenance** Users can see the electrolyte level by checking the position of float. Remarkably short replenishing time.
- **Long life** Like V series batteries, we apply tubular plates for GC series as well.
- **Wide usage** Used for industrial equipment like Automatic Guided Vehicles in the figure below.

SLH Series (Made in Japan)

More possibility with SLH series batteries

Model	Voltage	Capacity (Ah)		Dimension (mm)				Mass (kg)	Nut insert
		5h rate		L	W	H	Total H		
SLH65	12	65		292	176	219	219	25.5	Nut insert
SLH100	12	100		412	176	219	219	36.5	

Advantages

- **Long life** 600 cycles with DOD 75%
- **Flexible deployment** (Figure1)
- **Maintenance free**
- **Less self discharge** Maintain capacity for long time

Figure1

It can be installed in both vertical and horizontal orientations.

SER Series (Made in Japan)

Compact Energy that enriches your life Long life span

Model	Voltage	Capacity (A)		Size (mm)				Mass (kg)
		5HR	20HR	L	W	H	Total H	
SER38-12	12	32	38	199	165	176	176	14

Advantages

- Achieved with 75% discharge and 600 cycles
- Lead-free terminals considering the environment
- Maintenance-free (no watering required) cycle service battery

What is a cycle service battery?

A cycle service battery is a battery suitable for DC power supplies that are used by discharging and charging alternately, such as using during the day and charging at night.

SERVICE

"WE SUPPORT THE CUSTOMER OPERATION ENHANCING THE PERFORMANCE, ENERGY SAVING AND COST SAVING"

Benefits

MS will provide best solution to make sure that our customer can use battery with full capability and worthwhile based on battery condition.

After Sale Service

- Check and PM. our battery during warranty.

Service Contact

- Periodical Check and PM battery after warranty
- Monthly Check and PM battery

Battery Management Consultancy

- Monitoring battery condition and recommend how to managed forklift and battery using condition of main customer.

Short time of Claim System

- Have spare cell for support and shorten Customer breakdown times.

Warning Report System

- Recommend best practice to customer by comparing our suggestion with existing condition.

Technical on Site

- Managed battery usage FIFO Monthly PM battery.

Express Service Programs

- Urgent or Serious Case : Batt. exploded, generates fire, etc..
- Abnormal Case : Battery falls down, connector lost or crack, etc..
- General Case : Operating time reduced, request comments, replace cell etc..

Fast And Precise

Professional

Knowledge , Skills

Manufacturing Batteries for Over a Century

In 2017, GS Yuasa Group celebrated its 100th anniversary. Our range of solutions today includes batteries, power supply systems, lighting equipment, specialty equipment, and many other electrical devices. In this day and age, we are seeing many different ways to use and to store energy, and our customers have great expectations for groundbreaking products specifically tailored for applications in new energy fields, such as photovoltaic power.

We are able to leverage all our experience and all the technologies we have developed over the past 100 years and push ourselves to keep developing these cutting-edge technologies.

In this way, we hope to become a real driving force for innovation.

Our ambition is to make a valuable contribution to the lives of people all across the world, based on our company policy of "Innovation and Growth".

Battery Standard: JIS type

CAUTIONS

1 Avoid overdischarging.

Overdischarging will shorten the life of your battery. You must avoid driving until the very last moment when your vehicle can no longer move

2 Avoid overcharging.

Overcharging will also shorten the life of your battery. The battery must be charged using the proper method.

3 Avoid the battery overheating.

Always keep the temperature of the electrolyte below 60°C.

4 Keep the electrolyte level at the proper height.

The electrolyte level will gradually get lower when the battery is being used. When the electrolyte level decreases, fill up with distilled water straight away.

5 Fire is strictly prohibited.

Since hydrogen and oxygen are released through the vent plugs of the battery always keep the battery away from fire.

6 Keep the battery clean and dry.

Keep the outside of the battery clean and dry to prevent leakage and corrosion.

You can also check the latest compatibility chart on the web.
